

Student home computer

The role of computers and technology in education has been well documented for many years. In addition, it has been found that the number of students with access to home computers has been steadily increasing. Little research has been conducted to investigate not only the role of the home computer and how it may contribute to learning at school by students but also the role parents can and should play in this regard. This article examines these issues and recommends further research in this area, particularly in Alberta, where the mandatory implementation of an integrated approach to technology curriculum is about to take place, as outlined in the Information and Communication Technology Outcomes (Alberta Learning, 2000).

Three Main Components

- Motherboard
- Ram Memory
- Cpu

Three upgraded parts

- Graphics Card
- Sound Card
- Power Storage

I would not spend extra money on these because they are not a priority for student home computer.

There are many vendors that sell all sorts of PC parts but personally I always go to PC Canada or Canada Computer or even PC Part Picker I always choose these vendors because they can help you build a pc and help you choose by recommending the right PC parts for the type of pc you are building
